- FactForge: http://factforge.net/
- RDF triples
- Search by SPARQL queries

- Pre-constructed queries, user writes only the keyword
- Options:
  - Search for similar terms
  - Search for subterms

- The pre-constructed query is like this:

```
SELECT ?item ?name
WHERE {
?item <isA> <ourTopic> .
?item <isNamed> ?name
}
```

Technical aspects

SELECT ?item ?name

WHERE {

?item <isA> <ourTopic> .

?item <isNamed> ?name

}

- In place of <isNamed>:

    - http://www.w3.org/2000/01/rdf-schema#label

Problems with isA relation

- The ontology doesn't have one.
- Category vs. item
- Category: "Horses in art", "Leonardo da Vinci paintings", "Seafood"
- Item: "Knight (chess)", "Mona Lisa", "Lobster"
- Rembrandt vs. Category:Rembrandt

- Domain-specific relations
- All paintings belonging to some genre:
  - ?artwork rdf:visual_art.artwork.art_genre dbpedia:Abstract_art
- All paintings painted by Rembrandt
  - ?artwork rdf:visual_art.artwork.artist dbpedia:Rembrandt
  - ?artwork skos:subject dbpedia:Category:Rembrandt_paintings

- An early draft of a museum grammar - can I extend its vocabulary with ontology search?
- Starting point: words already in grammar
